1: Getting Started

You can select the video input from the “Sources” menu. To select the built-in computer on the lectern, choose “PC”. The button will turn Red.

If the Crestron Panel has gone into sleep mode (and is black) touch the screen to wake it up. You will see the OSU splash screen. Touch the screen again to begin. The main screen will appear.

3: Source options

There are different inputs available: the built-in PC on the lectern, along with HDMI and VGA ports for guest laptops.

2: Select your source

Audio
Where you can control the computer audio and microphone volume

NOTE: The microphone volume will NOT adjust the levels in Zoom

Camera
Select the “Camera Controls menu” to change the Preset view and to pan/tilt or zoom the camera. Presets 1, 2 and 3 have already been configured for commonly used angles.

If you wish to configure a new Preset, do the following: Use the Pan/Tilt and Zoom controls to select the desired viewpoint. Click on the “Save Preset” button. Press the “Preset 4” button. The current view will be saved.
